CLEVELAND STATE HIGH SCHOOL

STUDENT ENGAGEMENT CENTRE

Cleveland State High School is located in the Redlands, a city to the southeast of Brisbane that has undergone a large population growth. The School now has the 4th largest student population within the Queensland State Education system. A large covered area to be utilised as a Student Engagement centre was commissioned by the Queensland Education Department.

IRT Roofing selected DeltaTrim™-EPS-FR panels with a 150mm core, offering a ready-made solution that could meet the project's technical requirements. All the roofing panels were finished with a Shale Grey trapezoid top sheet and a Surf Mist interlocking steel under skin.

The roof was designed as a cantilever divided into 6 separate sections. Half of the roof required the panels to span 15470 mm while the balance of the roof panels measured 11850 mm.

WHO IS NEW AT DELTA?

MEET THE NEW FACES OF DELTA PANELS

Delta Panels is excited to announce the arrival of several talented individuals to its ever-growing team. These fresh faces bring a wealth of knowledge, skills, and passion that will undoubtedly contribute to the continued success and innovation of the company.

Joining us as a receptionist, we welcome Neomai. With her extensive experience in admin, Neomai is poised to make an immediate impact on our customer service team. Her expertise and dedication to excellence align perfectly with our company values, and we are eager to see the valuable contributions she will make.

Next, we are delighted to introduce Holly, our new Despatch Administrator & Claims Officer. She brings a dynamic skill set in all areas of despatch and product claims, which will prove invaluable in driving forward our despatch department initiatives. With a strong track record of success in previous roles, Holly is primed to take on the challenges of her new position and help us reach new heights.

Delta Panels takes pride in assembling a team of diverse and talented professionals, and these new additions further strengthen our ranks. Their skills, expertise, and passion align perfectly with our company's vision and values, ensuring that we continue to deliver exceptional products/services to our valued customers.

ROOF LAMINATING MACHINE UPGRADE

To improve the consistency of the flatness of steel finish on the under skin on our range of DeltaTrim ® & DeltaOrb ® roof panels we have installed a new upgraded feed-in section to our continuous roof laminating machine. It was also a great opportunity to upgrade the adhesive monitoring and application systems. We are very grateful for everyone that worked over the week end to ensure that there was no interruption to our production schedules.

BUSHFIRE ATTACK LEVELS (BAL) TESTING

AS 1530.8.1 Bal 29 Wall Test | DeltaCool-TPC

When undertaking a construction project in a deemed bushfire prone area it is essential to assess the correct BAL rating when determining the actual design of the building and the materials that will be used.

To conform to the Australian Standard AS3959:2018 Construction in a Bushfire-Prone area we recently commissioned an AS 1530.8.1 Bal 29 Wall test. We are pleased to report that our DeltaCool-TPC® wall panels successfully passed the test. The full CSIRO test report is available in the download section of our web page.

LATEST UPDATE ON QVM

Update on the Queen Victoria Market Heritage Shed Restorations

The Queen Victoria Market (QVM) is just about to start the final stage of the major Heritage Shed Restorations upgrade. This has been an ongoing project completed in stages over the last 2 years. Delta Panels™ is proud to be involved with the supply of the DeltaCorroCorro-TPC™ insulated roof panels for this project.

The restoration project has been shortlisted for the 2023 Australian Institute of Architects, Heritage Architect Award.
